

Skills, levels of responsibility, generic attributes and behaviours.

Cloud applications technologies and techniques.

Work outputs, outcomes and business results.

Illustrative examples

Configuring cloud services.

Utilizing AWS Service Catalog.

Efficient and consistent cloud service provisioning.

Automating deployment processes.

Implementing CI/CD pipelines with Jenkins.

Streamlined and error-free deployments.

Ensuring system security and data protection.

Enforcing policies with Azure Security Center.

Robust security posture and compliance.

Maintaining service availability and performance.

Monitoring with Google Cloud Operations Suite.

High system uptime and optimal resource usage.
